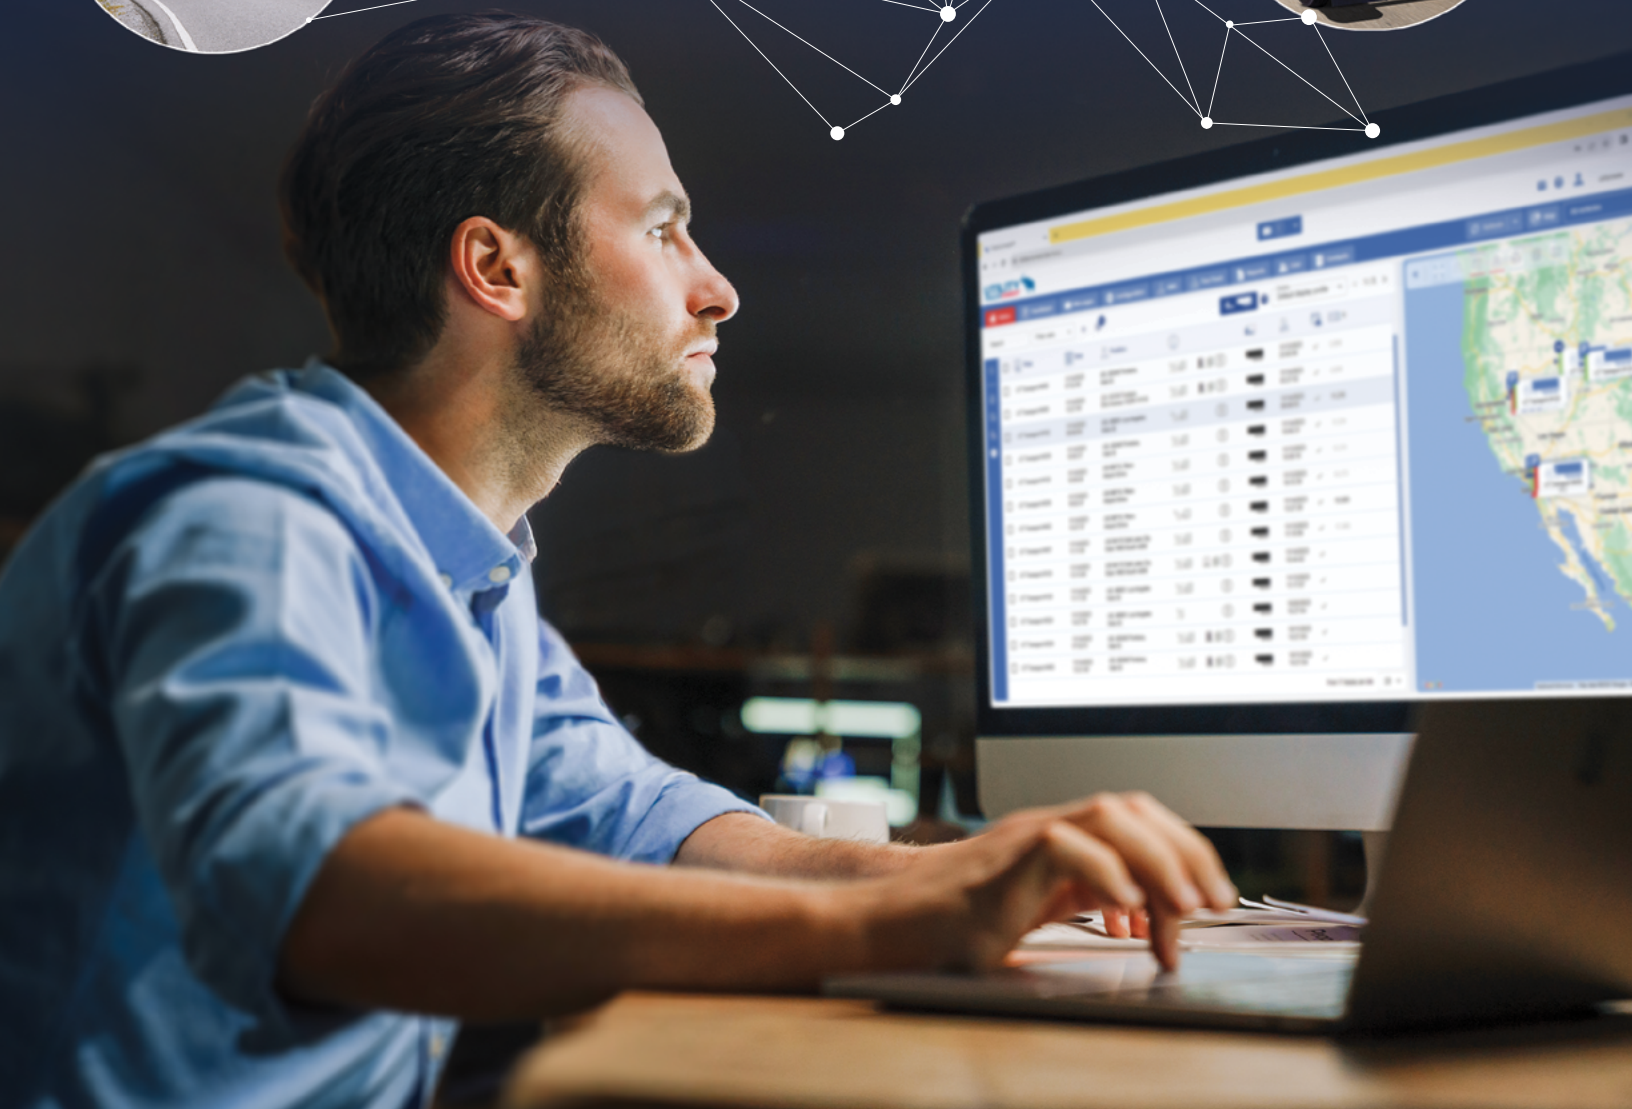
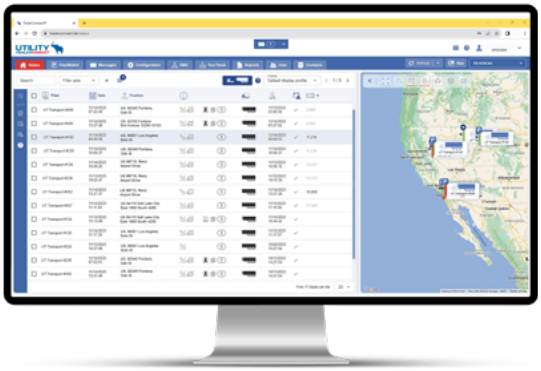
GET TOTAL FLEET VISIBILITY WITH UTILITY TrailerConnect

UTILITY TRAILERCONNECT



REMOTELY MONITOR CRITICAL ELEMENTS OF YOUR FLEET

Monitor more of your assets, more simply, with one unified telematics ecosystem for every trailer type. UTILITY TrailerConnect links reefers, dry vans, and flatbeds on a single smart platform, delivering consistent data, centralized fleet management, and complete visibility across mixed fleets. Whether factory-installed or retrofitted, its scalable architecture supports future technologies while helping fleets improve efficiency, productivity, and operational control.



Real-Time Fleet Visibility & Smart Alerts

Access live operational data across your fleet and receive targeted, actionable alerts that help fleet managers, dispatchers, and drivers respond quickly to critical events. With real-time data on trailer conditions, UTILITY TrailerConnect supports faster decision-making while reducing unnecessary notifications and data overload.

Geo-Location Tracking

Track trailer locations in real time to improve asset utilization, enhance security, and streamline fleet operations across your network. Gain instant visibility into trailer movements, helping optimize dispatching, reduce idle time, and improve overall operational efficiency.

Axle Weight Monitoring

Coordinate loads better. Gain immediate insight into trailer axle weights to help optimize payload distribution, maximize asset utilization, and improve operational efficiency.

Tire & Brake Maintenance Alerts

Monitor tire pressure, tire health, and braking system performance through integrated trailer diagnostics that help improve safety and reduce unplanned downtime. By providing early warnings and actionable maintenance insights, UTILITY TrailerConnect helps fleets lower maintenance costs, minimize roadside events, and maximize trailer uptime.

RSS Events

Enhance safety and compliance with regulatory standards. The system logs and displays RSS events and ABS faults, providing critical data to help you identify and address issues quickly.

GAIN COMPLETE CONTROL OF YOUR COLD CHAIN OPERATIONS

UTILITY TrailerConnect comes standard on 3000R® refrigerated trailers equipped with a Cargobull transport refrigeration unit (TRU). The integrated body control unit (BCU) streamlines communication between the trailer and TRU, delivering enhanced connectivity, proactive maintenance insights and better fleet management.

Door Sensors, Alarms & Geofencing

Integrated door sensors provide visibility into door activity and cargo movement throughout transit. Enhanced monitoring helps fleets maintain load integrity and improve operational efficiency.

Alerts & Predictive Maintenance for the TRU

With alerts and predictive maintenance, you can plan better and ensure your cargo remains at the optimal temperature. Minimize the risk of spoilage and downtime while enhancing overall operational efficiency.

Remote Timer, Start & CargoSets

Optimize performance and cost savings. Pre-cool, maintain the optimal temperature, and save energy with remote start, timer, and predefined CargoSets to enhance efficiency and reduce energy consumption.

Temperature Monitoring & Control

Prevent inconsistent temperature that leads to product damage. Advanced monitoring capabilities and timely warning messages help you maintain optimal temperature, ensuring the integrity and quality of transported goods.

Battery & Fuel Status

Proactive monitoring helps prevent unexpected disruptions, allowing for safe and efficient transportation of your goods. Knowing the battery charge and fuel status gives ample time to plan and ensure the proper temperature can be maintained during hauls.

24/7 Software Updates for Fleets

Update CargoSets and Cargobull software across your entire fleet in seconds so your fleet is always running the most current and secure software for optimal operational efficiency, security, and consistency across all your vehicles.

DRIVERS

React Quickly to Trailer Status Changes

- Instant alerts and malfunction warnings
- Centralized trailer and TRU information
- Optimized route planning
- Efficient communication with dispatchers

Download the ***beSmart*** App

Download on the App Store

GET IT ON Google Play

FLEET MANAGERS

Always Stay up to Date

- Fast digital documentation availability
- Select optimal vehicles and equipment
- Centralized transport order monitoring
- Quickly communicate with drivers or dispatchers

Download the ***beUpToDate*** App

Download on the App Store

GET IT ON Google Play

DISPATCHERS

Manage Trips More Efficiently

- Complete fleet visibility, including subcontractors, in one portal
- Remote access to trailer and TRU data
- Real-time set point corrections
- Automatic trip recording
