A powerful principle continues to guide the way Utility builds strong, light weight refrigerated vans. It is to press forward and continually innovate while staying true to our timeless pledge of quality. That is how we continue to engineer reefers that deliver more value to the customer; through a lower total cost of ownership, a higher resale value, and a better overall ownership experience.

Our founders H.C. and E.W. Bennett put it this way, “Our trailers are preeminently a product of a higher ingenuity, made possible by years of close study of the practical operation of trailers.”

Utility is a company that for over 100 years has been committed to making the most innovative, light weight and durable refrigerated trailers available in the marketplace.

MAXIMIZED TEMPERATURE CONTROL
Our reefer design minimizes risk of contamination and delivers superior temperature control.

A Utility reefer is a crafted work of ingenuity, and a close study has made it highly efficient and technically advanced in the industry. From its exterior skin to every exacting detail inside, under and above, a Utility refrigerated van is a continuing promise to each customer that they will get an innovative, light weight and durable trailer. This is why a discerning customer can count on it to be a better business decision.
EVERY IDEA IS PUT TO THE TEST

We put every trailer design through rigorous testing on our proprietary and industry exclusive torture test track. This is how we keep our promise that every Utility trailer will deliver exceptional performance in the real world.

A first step in FSMA compliance

Today carriers must provide assurance that transport vehicles are clean and that foods that require refrigeration are safely transported under “adequate” temperature control. A Utility reefer offers a refrigerated transport business a proven choice that surpasses FSMA compliance.

Each business requires a reefer with a unique set of capabilities. That is why a Utility reefer can be customized with options to optimize your operation and make it more productive and profitable.

OUR QUALITY MAXIMIZES FOOD SAFETY

Optimized thermal efficiency ensures the quality of refrigerated and frozen products for your customers.
Advancing our definition of standard

Always upgrading our base spec reefer design to maximize reliability and performance

**Foam mandrel with foam-in-place insulation**

Foam-in-place insulation provides 360-degree foam to ensure that the entire trailer is fully insulated, 100% void free. With no points to foam later, this process delivers optimum thermal efficiency.

**20K aluminum duct floor system**

The aluminum duct floor system has a 20,000 lb. capacity for fork trucks with 12" wide front tires. Full-length hardwood floor fillers from sustainable sources give added support for optimum performance. Aluminum I-cores at the rear 36" and its exclusive bearing "grid" system, provide extra support in the critical dock to trailer transition.

**Utility-designed rear Barrier Door®**

The bonded foam "sandwich" design improves thermal performance and provides a tight seal. External "hat" sections mount all door hardware without "thru-holes" into the internal foam cavity, reducing moisture entry points, keeping the foam dry, and optimizing thermal performance.

**Hendrickson® ULTRA-A-K™ 40K air ride & slider system**

A heavy-duty slider box and Quik-Draw® air-operated pin pull mechanism improves load protection and lowers tare weight, and the exclusive Zero Maintenance Damping® (ZMD®) technology with shockless ride provides added driver comfort. Also standard is 96" of slider travel for increased versatility in load distribution and sharp turning radius conditions.

**Bendix® TABS-6™ advanced with trailer roll stability program**

Combines anti-lock braking (ABS) with a set of trailer sensors that monitor stability and automatically trigger braking intervention when detecting conditions that may lead to trailer rollover.

**.065" Versitex®-Utility VR2 lining**

Utility’s standard high impact lining on the complete interior and on the lower sub-pan (underskin) below the floor reduces maintenance costs. The highly durable, moisture resistant lining wards off damage from forklift impact, keeps the foam insulation dry, and reduces overall heat loss of the trailer.

Breakthroughs that better your bottom line

**Ongoing innovations translate into long-term value**

Our mission to build the industry’s best reefer means it must continue to get better. That is why a Utility reefer is engineered as a platform for continuous innovation and improvement. Therefore, it integrates the latest technology in order to affirm its status as a safe, highly efficient and productive reefer – offering a lower total cost of ownership.
Personalized is our custom

As the leader in reefer production for over twenty years, we invented a vast number of custom options that allow a business to get the ideal trailer for their specific application. With thousands of possible configurations, we will build a refrigerated trailer that maximizes efficiency. Whatever you require, from weight saving technology to highly custom, multi-temp food distribution options, Utility gives you choices that suits YOU. At Utility, customization is the principle of performance.

Dominance in the market

Utility has remained the dominant market share leader in refrigerated vans for over 20 years. It continues to be the #1 selling reefer and the preferred choice of both for-hire and private fleets in the food service industry.

Return on investment

Best resale value—a Utility reefer retains its value better than others commanding higher prices in the secondary market. Its strong, yet light weight design contributes to reducing maintenance costs and lowering operating expenses.

Engineered superiority

Our engineering philosophy of continuous improvement has made the 3000R® the most successful refrigerated trailer in history. The technology that is integrated into the light weight 3000R ensures that it optimizes thermal efficiency and maximizes performance.

3000R

Our base spec reefer remains the #1 selling reefer for more than 20 years because its standard features are a reflection of continuous improvement that maximizes thermal efficiency. It also offers additional options to enhance productivity and performance.

3000R Multi-Temp

Built with the same industry-leading technologies found on the 3000R, the 3000R Multi-Temp offers additional custom options to meet your operational requirements.
