

Better aerodynamics is now standard

We've enhanced the aerodynamics and fuel-efficiency of every reefer and dry van by including our patented Utility Side Skirt as a base spec feature.

- EPA SmartWay®-Verified
- California Air Resources Board Compliant**

■ USS-120A-4 advanced side skirt

SAE tested and SmartWay®-verified to improve fuel savings***, the Utility Side Skirt is also CARB-compliant when used with low rolling resistance tires.

■ Best-in-class warranty

Our industry-leading 5-year warranty reflects our confidence that the Utility Side Skirt is strong and durable, exceeding current industry standards.

■ Utility tested and approved

The Utility Side Skirt is put through rigorous real world tests to ensure that it will have the strength and durability to stand up to everyday wear and tear.

■ Enhanced structural integrity

The UV protected bi-directional Fiberglass Reinforced Plastic (FRP) skirt is engineered with a unique structural bend design at the bottom of the skirt for improved rigidity. The skirt maintains its structural integrity through impact damages that may occur on the road, and when the trailer is moving at higher speeds.

■ Meets EPA & CARB regulations**

The Utility Side Skirt has earned approval from the Environmental Protection Agency (EPA) for use as an aerodynamic device on dry vans and refrigerated trailers. The device also exceeds current CARB requirements.

■ Factory or dealer installed

Designed for factory or dealer installation, Utility Side Skirts deliver a higher level of performance.
